Currie Glucose transporter-1 and -3: cDNA partial sequences and developmental gene expression in the placenta.";
Placenta 18:393-401(1937) and placenta.";
Placenta 18:393-401(1937) and placenta. Probably a neuronal glucose transporter. Probably a neuronal glucose transporter.
-: SUBCELLULAR LOCATION: Integral membrane protein.
-: TISSUE SPECIFICITY: Highly expressed in brain.
-: SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.

"CDNA cloning and sequence analysis of the glucose transporter from porcine blood-brain barrier.";

Biol. Chem. Hoppe-Seyler 370:47-473 (1989).

-!- FUNCTION: Facilitative glucose transporter. This isoform may be responsible for constitutive or basal glucose uptake. Has a very broad substrate specificity, can transport a wide range of aldoses including both pentoses and hexoses.

-!- SUBCELLULAR LOCATION: Integral membrane protein. Localizes primarily at the call surface (By similarity).

-!- SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FYNESWERRHGRPIDPDTLTLLWSVTVSIFAIGGLVGTLIVKMIGKVLGRKHTLLANNGF

20. STRAIN-Fischer Specificative Glucose transporter binding protein

20. FUNCTION: Facilitative Glucose transporter. This isoform may be responsible for constitutive or basal glucose uptake. Has a very broad substrate specificity; can transport a wide range of aldoses including both pentoses and hexoses.

20. STREELIUIAR LOCATION: Integral membrane protein. Localizes primarily at the cell surface (By similarity).

21. STREELIUIAR LOCATION: Integral membrane protein. Localizes primarily at the cell surface (By similarity).

22. C. Inansporter subfamily.

-!-FUNCTION: Facilitative glucose transporter. This isoform may be
-!-FUNCTION: Facilitative glucose transporter. This isoform may be
broad substrate specificity; can transport a wide range of aldoses
including both pentoses and hexoses.
-!-SUBCELLULAR LOCATION: Integral membrane protein. Localizes
primarily at the cell surface (By similarity).
-!-TISSUE SPECIFICITY: Expressed at variable levels in many human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tissues.
Distance in SLC2A1 are the cause of autosomal dominant BISBASE: Defects in SLC2A1 are the cause of autosomal dominant GLUT1 deficiency syndrome [MIM:606777]. This disease causes defect in glucose transport across the blood-brain barrier. It is admaraterized by infantile seizures, delayed development, and acquired microcephaly.
SIMMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Brockmann K., Wang D., Korenke C.G., von Moers A., Ho Y.-Y., Brockmann K., Mann K., Yang H., Ma L., Kranz-Eble P., Pischbarg J., Hanefeld F., De Vivo D.C., Hanefeld F., De Vivo D.C., "Autosomal dominant Glut-1 deficiency syndrome and familial

"Differential regulation of glucose transporter isoforms by the src oncogens in chicken embryo fibroblasts.";
MOI. Cell. Biol. 11:4448-4454(1931).
-!- FUNCTION: Facilitative glucose transporter. Probably a neuronal glucose transporter.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EMBL, M37785; AAA48662.1; -.

primarily at the cell surface (By similarity). SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.

MOI. Biol. Cell 6:1575-1589(1995).

-!- FUNCTION: Pacilitative glucose transporter. This isoform may be responsible for constitutive or basal glucose uptake. Has a very broad substrate specificity, can transport a wide range of aldoses including both pentoses and haxoses (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein. Localizes 01-NOV-1995 (Rel. 32, Created)
01-NOV-1995 (Rel. 32, Last sequence update)
01-NOV-1995 (Rel. 32, Last amoctation update)
28-FEB-2003 (Rel. 41, Last amoctation update)
Solute crarier family 2, facilitated glucose transporter, member 1
(Glucose transporter type 1) (GT1).
SLC2A1 OR GLUT1.
Gallus gallus (Chicken).

Kasahara T., Kasahara M.;
Submitted (FEB-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Cytochalasin B-sensitive carrier. Seems to function primarily as a fructose transporter.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUB SPECIFICITY: Expressed in small integrine, and at much lower levels in Kidney, skeletal muscle, and adipose tissue.
-!- SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                           TIGRFAMS; TIGRO0879; SP; 1.

Proteomics 2:212-223(2002).
-!- FUNCTION: Cytochalasin B-sensitive carrier. Seems to f primarily as a fructose transporter.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Expressed in small intestine, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Takeda J., Minokoshi Y., Yasuda K., Kayano T., Bell G.I., "Exolution of facilitative sugar transporter gene family: characterization of mouse GLUT3 and human GLUT5 genes."; Submitted (JAN-1994) to the EMBL/GenBank/DDBJ databases.

Glucose transport protein - human
N.Alternate names: monosaccharide transport protein
C.Species: Homo saptens (man)
C.Species: Homo saptens (man)
C.Species: Homy-1988 #sequence_revision 21-May-1988 #text_change 24-Sep-1999
C.Saccession: Az7217; A45557; S13065
R.Mueckler, M.; Caruso, C.; Baldwin, S.A.; Panico, M.; Blench, I.; Morris, H.R.; Allaxoscience 229, 441-945, 1985
A;Title: Sequence and structure of a human glucose transporter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A, Molecule type: mRNA
A, Residues: 1.492 kMIE>
A) Residues: 1.492 kMIE>
A) Crossoreferences: GB:K03195; NID:g183302, PIDN:AAA52571.1; PID:g183303
A) Crossoreferences: GB:K03195; NID:g183302, PIDN:AAA52571.1; PID:g183303
A) Note: parts of this sequence were confirmed by peptide sequencing
A, Note: this protein was shown not to be processed at amino or carboxyl ends
